Hi Darren,

CDR Powell is in meetings today, so that's why I am emailing you. We would it be possible for us to see the modified language associated with the take for butterfly and snails that you all developed yesterday before we see the final BO?

Thanks so much.

Vr,

Jacque

Attached is Lasha's Excel Workbook on the fruit bat habitat impact calculation.

Based on your comments and our further review, we have proposed modifying the ITS as attached. The acreage figures for all of the species still needs to be verified by us and consistent in the entire document.

And as a side note, yes, the BO and ITS are technically 2 separate documents.

Attached are Figures 13 and 14. The Figure legends list the acreage to be impacted as 1817 in northern Guam and 319 in southern Guam. That is what the Effects section of the BO states also. I have asked Lasha where those numbers came from (we calculated or DON provided). The area in southern Guam was accidentally left out of the ITS and that will be corrected for the final.

Larry and Eric will also be on today's call.

Hi Darren,

Attached is an edited version from DON for the ITS based on our conversation Friday and including the summary language provide by you and Larry. We will be ready to discuss with you at 1500 EST / 0900 HST today.

If you could, please forward the graphic for the bat acreages so we can see where exactly the 18xx acres are....you'll see in our edited comments that we think the number should be 1897 but it is labeled 1817 throughout. I think you refer to this as "Figure 13"

Thanks!

V/r,
JSP
